

Jalen Jackson

Unity & Unreal Engineer: Gameplay Systems & Mobile

✉ jackson.jalen@proton.me  jalen-jackson  JayDawgThaGOAT

Summary

Software Engineer with 5+ years of Unity C# and Unreal C++ experience, shipping gameplay systems and production mobile titles across iOS, Android, and Apple Arcade.

Experience

Software Engineer, Identities, Zynga – Remote

Jan 2023 – present

- Migrated the C++ authentication SDK from reCAPTCHA Classic to Enterprise for Unreal Engine 5 iOS, packaging Swift frameworks via CMake for cross-platform engine plugin use
- Gated Apple Game Center login behind iOS Lockdown Mode across both C# and C++ SDKs, using dependency injection so non-iOS platforms compile cleanly without the guard
- Built a real-time push notification package for Unity C# that lets games refresh account UI immediately after email verification, without polling the backend
- Fixed a callback bug in the C++ Unreal layer that left stale account state across attach, detach, and email-update flows, aligning C++ behavior with C# without breaking existing customers
- Forward-ported Unreal UI fixes and resolved merge conflicts across release branches to ship reCAPTCHA v3 into a production title

Software Engineer, Unity, Playdots – Remote

June 2021 – Jan 2023

- Owned core gameplay systems in Unity C# for Two Dots, a top-100 mobile title, delivering the level editor pipeline and mechanics that powered ongoing releases
- Led Garden Tails from alpha to Apple Arcade global release, architecting the localization pipeline and ensuring App Store compliance for worldwide distribution
- Shipped Unity C# monetization systems for Garden Tails, including an MVC Credits scene and in-game economy features that drove player re-engagement

Education

California State University, Fullerton, B.S. in Computer Science – Fullerton, CA

Jan 2021

Skills

Engines & Languages: Unity (C#), Unreal Engine 5 (C++), Godot (GDScript), Objective-C++

Platforms & Build: iOS, Android, Apple Arcade, CMake, xcframework, Xcode, UPM
