

Jalen Jackson

Software Engineer: Mobile SDK & Authentication Systems

✉ jackson.jalen@proton.me  jalen-jackson  JayDawgThaGOAT

Summary

Software Engineer with 5+ years building cross-platform mobile SDKs, authentication systems, and identity infrastructure across iOS, Android, and game engine platforms.

Experience

Software Engineer, Identities, Zynga – Remote

Jan 2023 – present

- Authored the cross-platform secure token storage tech spec, designing iOS Keychain persistence with lazy migration from legacy PlayerPrefs and a Unity Editor fallback
- Migrated the iOS Keychain package to Swift Package Manager and root-caused an access-group bug where iOS defaulted to the wrong entitlement, publishing a podspec fix
- Implemented Android token persistence in C++ via a JNI bridge to Kotlin, adding the missing platform branch that had blocked token storage from ever being written
- Shipped a Kotlin Auto Backup bridge library and authored the Block Store replacement tech spec to eliminate a cold-start restore race that left auth reading empty storage
- Guarded Attach and Login against concurrent duplicate calls in C#, eliminating double recovery pop-ups from rapid taps on Apple Game Center and Google Play Games

Software Engineer, Unity, Playdots – Remote

June 2021 – Jan 2023

- Owned core gameplay systems in Unity C# for Two Dots, a top-100 mobile title, delivering the level editor pipeline and mechanics that powered ongoing releases
- Led Garden Tails from alpha to Apple Arcade global release, architecting the localization pipeline and ensuring App Store compliance for worldwide distribution
- Shipped Unity C# monetization systems for Garden Tails, including an MVC Credits scene and in-game economy features that drove player re-engagement

Education

California State University, Fullerton, B.S. in Computer Science – Fullerton, CA

Jan 2021

Skills

Languages: C#, C++, Objective-C, Kotlin, Java

Platforms & Tooling: iOS Keychain, Android Auto Backup / Block Store, JNI, Swift Package Manager, CocoaPods, Xcode, Gradle, Artifactory
