

Jalen Jackson

Software Engineer: Cross-Platform Systems & Mobile

✉ jackson.jalen@proton.me  jalen-jackson  JayDawgThaGOAT

Summary

Software Engineer with 5+ years building production software across mobile, game engine, and SDK platforms in C#, C++, Java, and GDScript.

Experience

Software Engineer, Identities, Zynga – Remote

Jan 2023 – present

- Authored the AuthenticationFlow API guard recommendations, scoping a single concurrency flag to replace granular per-method flags and categorizing which public auth entry points need guards
- Drove V2 API naming consistency across the C# and C++ SDKs, aligning public callbacks and methods to remove cross-platform drift
- Migrated reCAPTCHA from Classic to Enterprise in C++ for Unreal Engine 5 iOS, writing a reusable CMake helper to embed Swift frameworks into the static auth library
- Fixed WebGL incompatibility in the C# SDK by replacing blocking delays with a task utility, preserving the base-class contract for WebGL builds
- Refactored the ImpersonateAccount API to Impersonate across the C++ SDK, unit tests, and integration tests, replacing the legacy command in the launcher

Software Engineer, Unity, Playdots – Remote

June 2021 – Jan 2023

- Owned core gameplay systems in Unity C# for Two Dots, a top-100 mobile title, delivering the level editor pipeline and mechanics that powered ongoing releases
- Led Garden Tails from alpha to Apple Arcade global release, architecting the localization pipeline and ensuring App Store compliance for worldwide distribution
- Shipped Unity C# monetization systems for Garden Tails, including an MVC Credits scene and in-game economy features that drove player re-engagement

Education

California State University, Fullerton, B.S. in Computer Science – Fullerton, CA

Jan 2021

Skills

Languages: C#, C++, Java, GDScript, Objective-C, Kotlin

Platforms & Practices: iOS, Android, Unity, Unreal Engine 5, WebGL, JNI, CMake, SPM, Gradle
